

Doors & Locksets

Doors

With our Door supply services we can customize your doors and we offer a full range of face and wood species options, factory and custom finished. We are committed to build doors that outlast changing styles, doors that stand up to years of use.

WOOD DOORS

Wood adds beauty and distinction to every setting. CTG has the wood doors to meet every need you have from very opulent to a standard commercial grade door.

One of the greatest appeals of wood is the fact that no two pieces look exactly the same. You're not stuck with the "cookie cutter" feel left by other, more uniform building materials. Grain patterns and color vary widely, adding texture, warmth and personality.

CTG gives homeowners the freedom to take full advantage of this reality. We offer a broad range of species, each with its own distinctive character.

FIBERGLASS DOORS

Fiberglass door systems outperform wood and steel doors as they don't split, crack, rot, dent, or rust.

Fiberglass doors are much more energy efficient than wood doors, combined with high quality weatherstripping, a kerfed door bottom, and an adjustable sill that seals out air and moisture.

- ▶ Easy installation
- ▶ Energy efficiency
- ▶ Wood grain texture available
- ▶ Resistant to scratches and dents
- ▶ Excellent for severe weather climates
- ▶ Excellent for high traffic entrances
